

# Edit menus

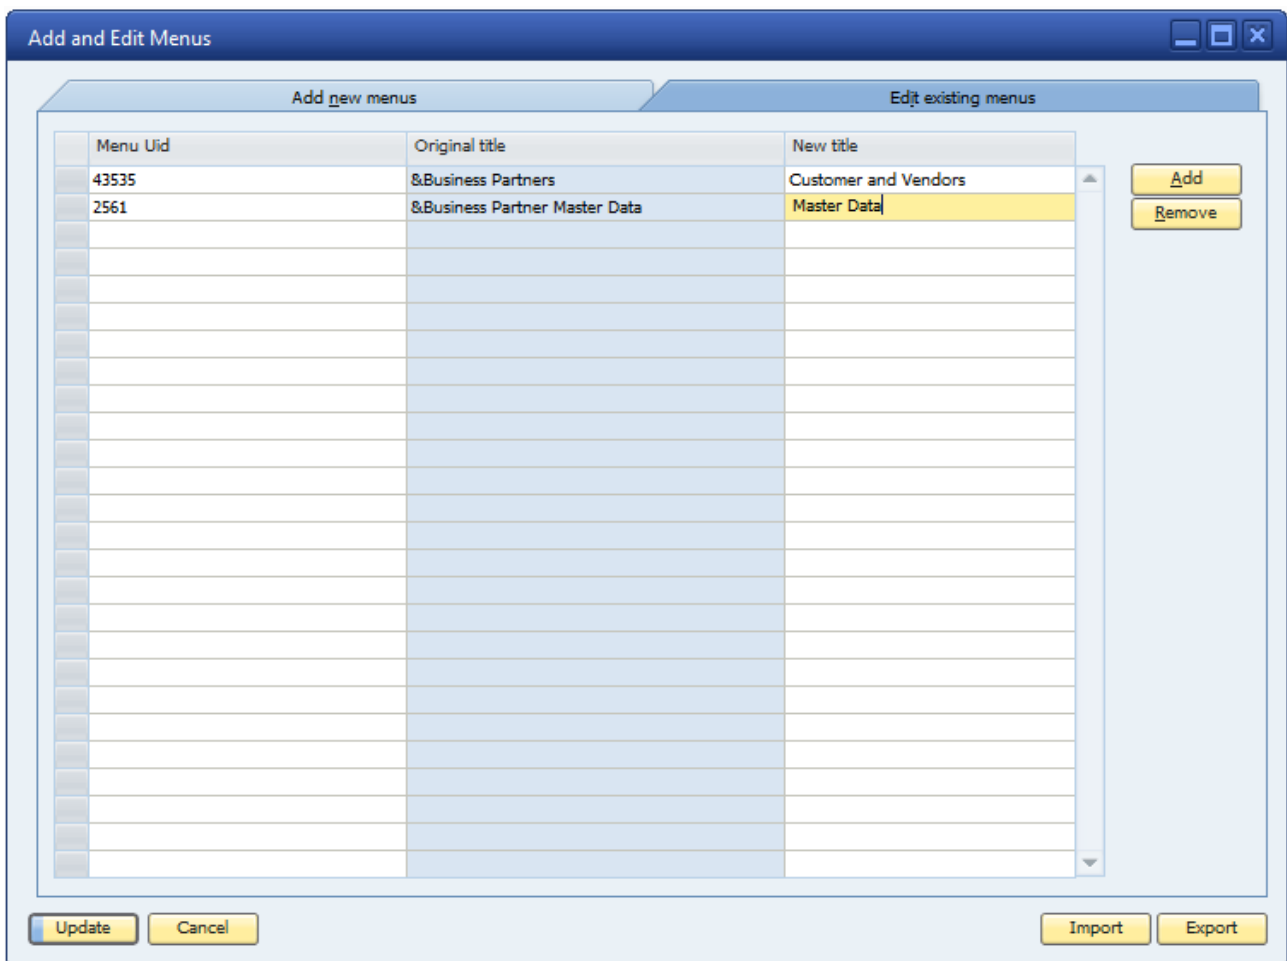

Summary	
<b>Module</b>	Add and Edit Menus, Universal Function
<b>Level</b>	Easy
<b>Requirements</b>	2.9.2.0 or higher

## Scenario

The customer wants to rename The Business Partners menu to Customers and Vendors, and wants to rename the Business Partners Master Data menu item to Master Data.

## Needed Configuration

You will need to create an Edit Menu configuration containing entries for each menu or menu item you want to rename. This is done from the Add and Edit Menu Configuration window: Main Menu > Administration > Add-Ons > B1 Usability Package > Module configuration > Add and Edit Menus. Below is a screenshot of this configuration:

Menu Uid's from menus and items in the Main Menu can be found by enabling System Information in View > System Information. This will show the unique id's of items in the lower left corner of the SAP Business One window. To view a Menu Uid you have to hold the mouse over the item you want to examine. This is best done from the top menus in SAP Business One, as the menu uid's are not always shown in the main menu. The screenshot below shows the system information when holding the mouse over the Business Partners menu, in the top menu:

[Menu Uid=43535]

Updating this window with the above two entries will rename the relevant menus/menu items, but not change their functionality. The screenshot below shows the Main Menu of SAP Business One after updating the above Edit Menu configuration:
