

## Line Loop – Samples – Automatically Check if Unit Price is Less than Item Cost

Summary	
Module	Universal functions
Level	Advanced
Requirements	B1UP 2015.08 or higher

### Description

This sample will show you how to automatically checks if the Unit Price is less than the Item Cost in a Delivery Note. If yes, we will pop up a warning message and give user a choice to Add the document or block the event and make the necessary change.

### B1 Validation Configuration

We will first create a Validation that triggers every time when user presses Add or Update.

B1 Validation Configuration (v.2016.0.9.0) [920110]

Name	Check Unit Price v Item Cost	Sort	100	Number	175
Users (Empty = All)				<input checked="" type="radio"/> Include users	<input type="radio"/> Exclude users
<b>Trigger</b>					
Formtype	140	...			
Item	1	...			
Column					
Row		...			
Menu Uid		...			
Use ; to target multiple Forms/Items/Menus					
FormMode	Add/Update	?			
Event	Item Pressed [Click on buttons, ect.]	?			
BeforeAction	True	?			
ActionSuccess	Ignore	?			
ItemChanged	Ignore	?			
InnerEvent	Ignore	?			
BubbleEvent	Ignore	?			
CharPressed		Modifier	None		
<input checked="" type="checkbox"/> Prevent event looping					
<b>Comments</b>					
Category: <input type="text"/>					
<input checked="" type="checkbox"/> Active					
<input type="button" value="OK"/> <input type="button" value="Cancel"/>			<input type="button" value="Import"/> <input type="button" value="Export"/>		

**Condition**

- No condition, just execute function → UF-246
- Simple condition  
When item | (column) | Comparison type | Value | Type | Execute function
- SQL Condition Common SQL structures

#	Condition result	Function to execute
1		String(0)

**Add line** **Remove line**

## Universal Functions

Then in the 'No Condition' field, we will create a Line Loop that runs and checks every line.

Universal Function Configuration (v.2016.0.9.0) [920110]

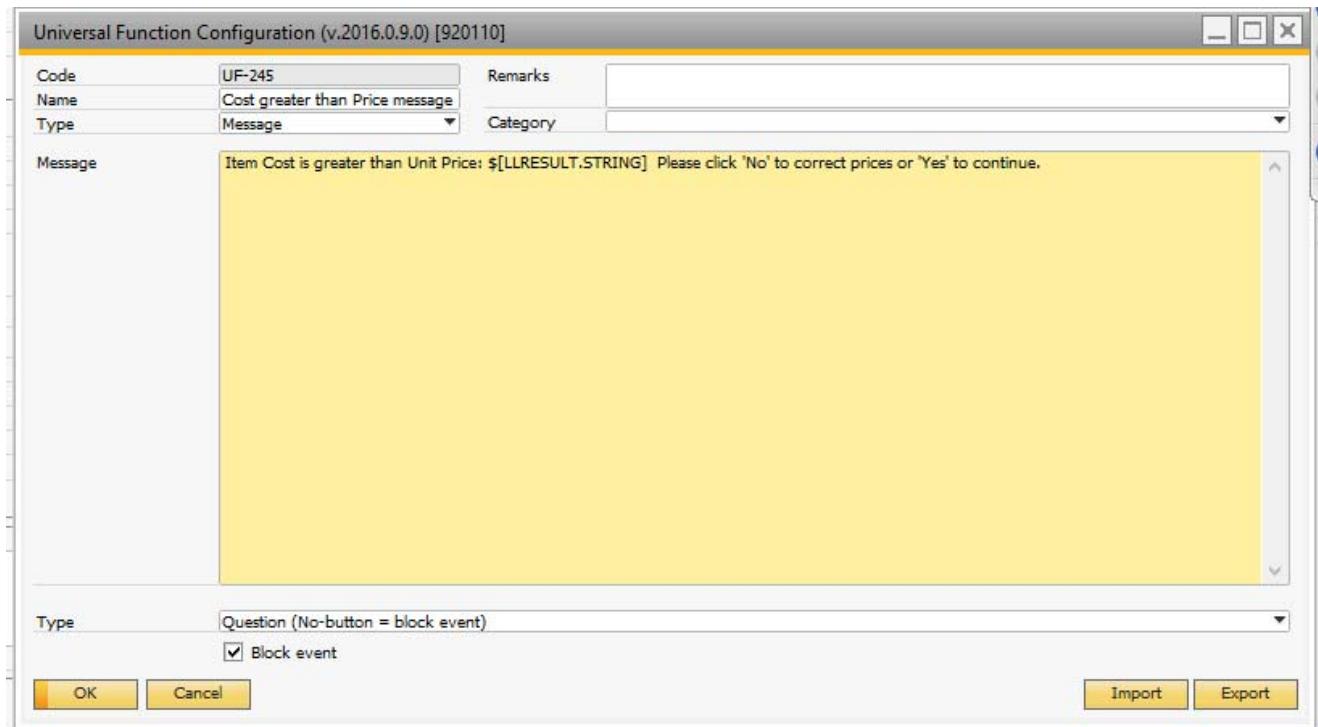

Code	UF-246	Remarks																													
Name	Cost greater than Price Check																														
Type	Line Loop	Category																													
WARNING: Only recommended for advanced users - All support from Boyum IT A/S on Line Loop are considered "Premium" (paid) service!																															
Line item UID	38	<input checked="" type="checkbox"/> Ignore last line <input checked="" type="checkbox"/> Freeze during line loop																													
<input checked="" type="checkbox"/> Ignore text-lines/sub-totals (Docs only)    Direction: First to last																															
<input type="radio"/> No condition	First pass UF	Line UF																													
<input checked="" type="radio"/> SQL Condition	<pre>IF(\${\$38.259.NUMBER} &gt; \${\$38.14.NUMBER}) BEGIN SELECT 'WARNING' FOR BROWSE END</pre>																														
<table border="1"> <thead> <tr> <th>#</th> <th>Result</th> <th>First pass UF</th> <th>Line UF</th> <th>Final result value</th> <th>Final result type</th> <th>Break loop</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>WARNING</td> <td></td> <td></td> <td>Line \${LINNUM}</td> <td>Append</td> <td><input type="checkbox"/></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>			#	Result	First pass UF	Line UF	Final result value	Final result type	Break loop	1	WARNING			Line \${LINNUM}	Append	<input type="checkbox"/>															
#	Result	First pass UF	Line UF	Final result value	Final result type	Break loop																									
1	WARNING			Line \${LINNUM}	Append	<input type="checkbox"/>																									
			<input type="button" value="Add"/>	<input type="button" value="Remove"/>																											
Final result	<table border="1"> <thead> <tr> <th>#</th> <th>Condition</th> <th>Value Type</th> <th>Compare type</th> <th>Compare value</th> <th>Universal Function</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Execute if not empty</td> <td>Result as string</td> <td>Equal</td> <td></td> <td>UF-245</td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>					#	Condition	Value Type	Compare type	Compare value	Universal Function	1	Execute if not empty	Result as string	Equal		UF-245													<input type="button" value="Add"/>	<input type="button" value="Remove"/>
#	Condition	Value Type	Compare type	Compare value	Universal Function																										
1	Execute if not empty	Result as string	Equal		UF-245																										
<input type="button" value="OK"/>	<input type="button" value="Cancel"/>	You can use \${LLRESULT.STRING} or \${LLRESULT.NUMBER} in the Final result UF				<input type="button" value="Import"/>	<input type="button" value="Export"/>																								

The SQL Condition for the Validation is as follows:

```
IF(${$38.259.NUMBER} > ${$38.14.NUMBER})
BEGIN
SELECT 'WARNING' FOR BROWSE
END
```

This condition checks line by line if the Item Cost is greater the Unit Price. If the condition is met, that is the Item Cost is greater than the Unit Price, that a message

Finally, we are creating the Universal Function pop up message as follows:

## Result

When Delivery is being Added or Updated, system will runs the line loop and pops up warning message as below.
