www.perfion.com

Drag-drop

Drag-drop is an important feature in Perfion. It has been missing from the web client until now, but Perfion Web 2022-R1 (5.0.0) now supports the following drag-drop operations:

- Drag-drop to categorize items (drag items from main grid to left-side categorizer)
- Drag-drop to change parents and change sort order (drag items inside main grids)
- Drag-drop to publish items into channels (drag items from main grid to channel node in Publish work mode)

In-grid editing

In-grid editing has also been missing from the web client until now. Perfion Web 2022-R1 (5.0.0) now supports the following in-grid editing operations:

- Updates to individual single-value explicit features (“apply weight 10,5 to a single item”)
- Updates to same feature for multiple items (“apply color Red to all items at once”)
- Updates to date fields (including short versions like 24, 2412 and 241225)
- Copy-paste values within same feature (CTRL+C / CTRL+V)
- Restoring previous values (CTRL+H)
- Deleting values (simply press Delete)

Category	Product	Group Image	Image	Item Name	Brand	Brand Logo	EAN	Weight (kg)	Color	Category Manager

Cooking	TI907201RW			EQ9	Siemens		4242003685099	10,5	Aluminium	Jonas

Item Details work mode

Work modes is a new concept in Perfon Web 2022-R1 (5.0.0). They allow you to split the screen horizontally and load panels to the right with item related functionality.

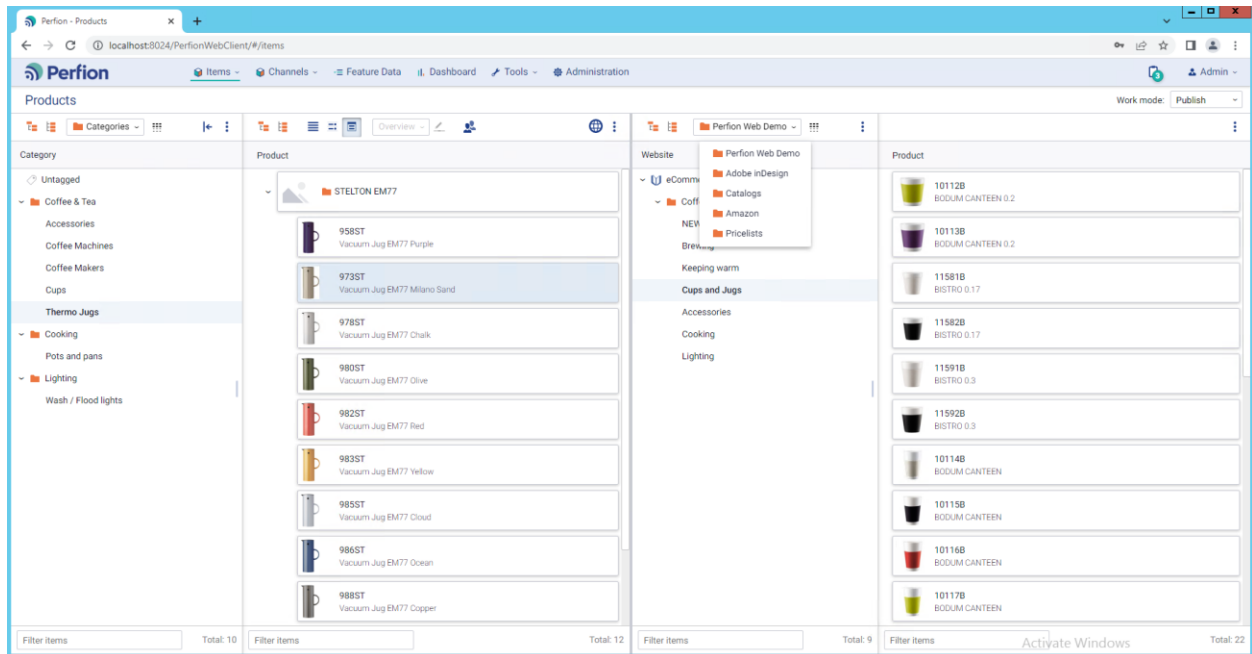

Item Details work mode is an embedded item editor. Combine it with the refactored card view in the main grid and you have a very effective editing tool where you can zoom in on selected data and easily switch between items.

Publish work mode

With the Publish work mode you can easily publish items into channels. Select the channel you need, and simply drag-drop items from main grid onto the channel node. This will add the items to the node. You can also drop items directly in between existing channel items if ordering is supported.

Channels

The Channel-concept used in the Publish work mode is a new construct in Perfon Web 2022-R1 (5.0.0). Channels are managed via the Channels main menu:

In this section you can add/delete nodes in the channel structure and maintain values on each node. You can also run reports and publish catalogs (if these are set up) via the 3-dot menu in the toolbar.

Notice that Channels also use work modes. The default work mode is Related Items. This enables you to see – and manage – items related to the selected node. Items can be removed from the node via the 3-dot menu at item level, and new items can be added to the node via the + button in the toolbar.

Items cannot be deleted from Perfion in the Related Items work mode nor can items be removed from their parents or moved to a new parent. These design decisions have been made to prevent users from making inadvertently mistakes and to protect items and data better.

Administration

Items and Channels are set up via Administration in the main menu.

The Sections-part allow you to select the sections from the windows client you want to see under Items in the Web client. Best practice is to select sections designed to manage “basic items” (products, files, images, spare parts, reviews, etc.).

Sections designed to publish items into channels (split-screen sections like catalogs, website, channels) should not be selected. Instead, rebuild these In the Channels-part to achieve what was shown above.

The screenshot shows the Perfion Administration interface. The left sidebar contains 'Sections' and 'Channels'. The main content area is divided into two sections: 'Sections' and 'Channels'.

Sections Configuration:

Name	Visible
Products	<input checked="" type="checkbox"/>
Catalogs	<input type="checkbox"/>
Website	<input type="checkbox"/>
Channels	<input type="checkbox"/>
Images	<input checked="" type="checkbox"/>
Files	<input checked="" type="checkbox"/>
Actions	<input type="checkbox"/>

Channels Configuration:

Name	Channel Feature	Related Features
Perfion Web Demo	Website	Product
Adobe inDesign	Adobe inDesign	Product
Catalogs	Catalog	Product
Amazon	Amazon	Product
Pricelists	Pricelists	Product

A 'New Channel' button is visible at the bottom of the Channels section.

Multiple languages in grid

With multiple languages in grid, you can now see, edit and translate localized feature values directly in grid.

As always, the grid shows values in the user's base language. Via the language button in the toolbar, additional languages from the user's profile can be added. All fields can be edited individually, naturally with respect to permissions.

When one or more secondary languages are selected, the grid adds a language parameter to localized feature captions.

The screenshot shows the Perfon Products grid interface. The grid displays a list of coffee machines with columns for Product, Image, Item Name (EN), Item Name (DE), Group Name (EN), Group Name (DE), and Subheader (EN). A language selection dropdown is visible on the right side of the grid, showing options for EN, NLD, and DE. The grid is currently set to display values in German (DE).

Category	Product	Image	Item Name (EN)	Item Name (DE)	Group Name (EN)	Group Name (DE)	Subheader (EN)	Subheader (DE)
Untagged	13689		Giga 5	Giga 5	Giga 5	Giga 5	New standards

Cooking	TI907201RW		EQ9	EQ9	EQ9	EQ9	A technological marvel	Ein technologisches Wunder

Read only features

The new read only property can be activated on any feature. When activated, the feature is locked for editing for all users including administrators. Values can now only be edited “programmatically” via:

- API inserts/updates
- “External” imports (read only values cannot be edited via imports done by users in the client)
- Actions
- Triggers

View specified by context

It is now possible for administrators to make sure a specific view is loaded in these situations:

- When a dashboard widget is clicked (view is specified in widget setup)
- When a left-side search categorizer is clicked (view is specified in select-part of API query)
- When a filter is applied in a grid (view is specified in select-part of API query)

Access to Feature Data as normal user

Normal users (= users who are not super users or administrators) can now be granted access to Feature Data via a role. This enables content editors to manage value lists (colors, materials, country lists, etc.) in a more purpose-built interface. It also allows content editors to benefit from multiple languages in grid as this also works in Feature Data.

In Feature Data, the content editor will be able to see features (left side) she has at least read-access to. In the right-side grid, the content editor will be able to create/delete items and manage values according to user rights.

The screenshot shows the Perfon Feature Data interface. On the left is a navigation menu with categories like File, Image, Search, String, Actions, Approvals, Assets, Brand, Catalog, Category, Chapter Template, Classification, Color, Country, Customer, eClass Select, and ECommerce Features. The 'Color' feature is selected. The main area displays a table with columns for Color (EN), Color (DAN), and Color (DE). The table contains 12 rows of color names and their translations. At the bottom, there are filter boxes for 'Filter Features' and 'Filter Items', and a 'Total: 42' indicator.

Color (EN)	Color (DAN)	Color (DE)
Aluminium	aluminium	Aluminium
Aqua Blue	Aqua Blå	Türkis

Changes from version 5.0.7 to 5.0.8

Bugs:

Issue ID	Title	Description
DEV-7164	Bugfix of sub-reports not showing images correct	When Perfion image control is used in a subreport the image is not shown. This has been fixed so both Windows client view/preview report and Application Server view report functions.

Changes from version 5.0.6 to 5.0.7

Bugs:

Issue ID	Title	Description
DEV-6705	Roles in cache did not refresh when adding new users and groups	The internal cache caches among other data the roles each user holds. This part of the cache was not refreshed when adding new users and/or groups to Perfion. This mainly affects the web client since the windows client gets a new cache on every start up.

Changes from version 5.0.5 to 5.0.6

Bugs:

Issue ID	Title	Description
DEV-6475	Selectables could be incorrectly opened	From the item editor, it was possible to open selectables even though they were read only. This has been resolved.
DEV-6435	Copy item was not possible	The security check made when wanting to copy an item was incorrect. Disallowing users to copy an item if they did not have rights to edit that item. This has been resolved.
DEV-6433	Bugfix of updating security/access after grid line update	When updating a grid line the security/access of the updated line/record is now also refreshed/updated.
DEV-6432	Not possible to delete cell value in grid	It was not possible for a user to delete a cell value in grid if the user did not have right to delete the item. This has been resolved.

Changes from version 5.0.4 to 5.0.5

Bugs:

Issue ID	Title	Description
DEV-6405	Selection issue in selectable overlay	When using cards in a selectable overlay, it was not possible to select an item. This has been resolved.
DEV-6361	Update for left side search without edit rights	The left side search functionality has been updated to support selectable features as search parameter.
DEV-6254	The main grid reacted incorrectly to keyboard inputs	When opening different dialogs in the Web Client, keyboard inputs was sent to the main grid behind the dialog. This could result in errors or even data loss. This has been resolved.
DEV-6253	Filtering on Remote Features did not work	When using filtering in the main grid, they did not work if the selected feature was a remote. This has been resolved.
DEV-6247	Issue with dates in left searches	When having a date in a left search panel, the Web Client would show an error when not inserting a date into the date field. This has been resolved.
DEV-6232	Editing localizable base value was not saved	When editing a localizable base value, that was also a selectable feature, the values were not saved. This has been resolved.
DEV-6217	Feature selector not translated correctly	Top nodes of any Feature selector were not translated correctly. The nodes were partly translated and sometimes reverted to other languages.
DEV-6190	Error when logging in to Web Client	Under a specific setup, a user would get an error when logging in. This has been fixed.
DEV-6166	Item Editor changed focus incorrectly	When hitting the Enter key in the item editor the focus jumped to another field. Issue was that a google translate button could be pressed and translate a random feature. This has been resolved.
DEV-6088	In grid editing could leave invalid data	When editing a feature in the grid, it was possible to leave the edit cell in an invalid state where the entered data was not saved or rejected. This has been fixed.
DEV-6087	Rich text editor would open incorrectly	It was possible to open the Rich text editor twice on top of each other making behavior faulty end could end in data being saved incorrectly. This has been resolved.
DEV-6051	Dashboard page size issue	The grid for the dashboard did not use the intended 3000 item page size but instead used the selector 10000 item page size. This has been resolved.

Changes from version 5.0.3 to 5.0.4

Important info: From this version on it is required that the database user, used to log in to the database connected to Perfion, has the **“View Server State”-right**. For information on how to give a user this access setup please see [here](#).

Bugs:

Issue ID	Title	Description
DEV-6220	Internal Perfion Cache now contains info on all users and roles	Changes has been made in the backend to accompany the cache, so it now contains Role-Info on all users, meaning that the change of a user does no longer need a refresh of the cache improving performance for the Perfion Web Client.

Changes from version 5.0.2 to 5.0.3

Bugs:

Issue ID	Title	Description
DEV-6214	Possible to log in with AD user without defining redirect URL in settings	When trying to log in with AD the user was met with an error about a wrong redirect URL. Use the correct redirect URL without the need of setting up a redirect URL in Perfion.
DEV-6137	Browser Google Translate Issue	Using the built-in browser function "Google translate" would cause errors in the Web Client. This has been fixed and is now possible.
DEV-6036	Multi value sorting was not locked by rights	If a user did not have edit rights for a feature, it was still possible to sort the values.
DEV-6014	Grid navigation with keyboard didn't work in some types of cells	Text areas can no longer be scrolled in the grid and are now truncated when longer than 3 lines.
DEV-6006	Links did not redirect correctly	Clicking on a link in the Web Client did not always redirect to the correct link.
DEV-5901	Refactored widgets	Widgets were refactored to get a more streamlined look across different widget types this also solved a bug where charts sometimes would be cut off and not be fully visible.

Features:

Issue ID	Title	Description
DEV-6066	Editing of Filters in grid	It is now possible to edit and create filters for the main grid.

Issue ID	Title	Description
DEV-6025	Import selectable validation captions	When setting up an import for Perfion data, the option to validate selectable data was not clear. These have been rewritten.
DEV-6019	Grouping of items in Grid	It is now possible to use the know "Group Items" function from the Windows Client in the Web Client. Simply select some items and click "Group Items" or use the shortcut "ALT + G".

Changes from version 5.0.1 to 5.0.2

Bugs:

Issue ID	Title	Description
DEV-6119	Scroll bar missing when showing images in card view	When showing images in the main grid in the card view mode, the scroll bar was missing. So it was not possible to see all the items.
DEV-6097	When saving a date, it would save it with a timestamp	Saving a date would save it in a date format with a timestamp which caused an offset in time.
DEV-6086	Date input value wasn't saved	Date input value wasn't saved due to the input field not getting focused after a date was picked.
DEV-6078	Switching languages could cause an error	In some cases, switching languages could cause an error when the page is reloaded.
DEV-6071	Item Editor failed on numbers	The Item editor failed to save if a comma was entered into a number feature.
DEV-6052	Error in feature data	When clicking on a feature type, an error was thrown.
DEV-6042	Not possible to delete feature value	If a user was setup not to have edit rights for the base feature of an item, then that user could not delete a feature value by pressing the "Delete" key. Even though the user had correct rights for that specific feature. This has been resolved.
DEV-6005	Error when having dates in Feature Search	When using a Feature Search for finding items, the Web Client failed if it included a date feature. This has been fixed.
DEV-5990	Base value visibility issue	If the user had limited rights for the base feature, the base value would not be shown. This has been resolved.
DEV-5983	Fix of layout issue in the item details editor	Language columns weren't left aligned in the item details editor. This has been fixed.
DEV-5975	Tri-state bug in toggle	Toggling from null to true on a tri-state Boolean would throw an error. This has been fixed.

Issue ID	Title	Description
DEV-5961	Item details incorrect item	When not having item details work mode active, the "selected item" was updated. This made an incorrect item appear when enabling item details.
DEV-5955	Formula editor did not work as intended	When trying to edit a formula feature, the editor moved focus away from the editor, meaning that a new value could not be input. This has been fixed together with some sizing issues in the same dialog.
DEV-5954	Editor validation error messages	When editing a feature that requires data to be input in a specific format, for instance a number, the error message that was shown disrupted the view in the grid. This has been fixed.
DEV-5935	Unique value save error	When saving a value on a unique value feature, the editor would be erroneous if the first save was unsuccessful.
DEV-5927	Spinner permanent visible	When deleting values in the grid, it was possible to get the loader spinner to get stuck. This has now been fixed.
DEV-5903	Header in grid sometimes disappears	When scrolling in the grid, the header/caption line sometimes disappeared. This has been resolved.

Features:

Issue ID	Title	Description
DEV-5757	Convert an item	It is now possible to Convert an item or items from Normal to Virtual or vice versa.
DEV-4440	Filters and Filter by value in grid	It is now possible to filter and filter by value in the main grid. Filter by value works mostly like the Windows Client and can be activated by shortcut ALT + K. Clear active filter is done with shortcut CTRL + ALT + L, or by clicking the menu item Select a stored filter is done with shortcut CTRL + ALT + K, or by clicking the menu item Editing and saving filters is yet to come at a later timer.

Changes from version 5.0.0 to 5.0.1

Bugs:

Issue ID	Title	Description
DEV-6022	Login issues in Web Client	If the local time zone was 10 hours or more from UTC time, the user could not login to the web client.

Issue ID	Title	Description
DEV-5999	Selecting a view would set the grid into incorrect mode	When the user selected a Group view, the grid behaved incorrectly afterwards. Editing items would reload them as empty. This has been resolved
DEV-5994	User with limited rights could not save value	In some circumstances, a user with limited edit rights could not edit a feature value. This has been fixed.

Changes from version 4.10.6 to 5.0.0

Bugs:

Issue ID	Title	Description
DEV-5881	Widgets without data was formatted incorrectly	When showing widgets on the dashboard the text for empty widgets was not shown correctly
DEV-5711	Language codes for base value	Added language codes for base value in Item Details.
DEV-5652	Functionality update for feature data	The feature data functionality has been updated to translate topmost level features using UI language and other features using data language.
DEV-5651	Edit search query editor issues	The dialog to edit a search query was broken. It now works and follow new design standards.
DEV-5633	Selecting a customized view could display to much data	Selecting a customized view in the main grid could result in showing to many columns in the grid.
DEV-5601	Output to file design update	The Output to file in main grid dialog has been updated to match current design.
DEV-5587	Saving custom views permission issue	It has been fixed so If the user does not have permission to edit or create a custom view from the main grid, the action is prevented.
DEV-5573	Expand all in feature data grid	In the feature selector tree in Feature Data, the Expand all button now works.
DEV-5564	Styling in paging control	Styling in paging control has been updated to follow the general styling.
DEV-5563	Selectables in searches checked rights	When using a search the selectable fields could be locked due to user permissions.
DEV-5554	Refresh keeps the filter active	When refreshing data in a grid, the applied filter is kept as applied.
DEV-5523	Small layout issues in Dashboard	Several small issues were found when in the layout of dashboard. These have been resolved.

Issue ID	Title	Description
DEV-5516	Several issues with security	Readers could do anything with editing. Readers could drag items. Shortcuts did not get locked when user did not have permits. This has been fixed so the proper controls are now in place.
DEV-5490	Several issues with Searches	Searches now have a leaner look and selectables now allow multiple selection correctly.
DEV-5315	Default value for boolean did not work	When setting a default value for a boolean in a filter search, it has been fixed so the value is correctly cleared.
DEV-5072	Factbox Css example removed	The Web Clients factbox had some faulty css which was redundant. This has now been removed. The config.json.exemplem file no longer has an entry for "Factboxcss".

Features:

Issue ID	Title	Description
DEV-5928	Installer for Web Client	This new installer makes it easier to install Perfion Web Client. Please read the documentation about installing Perfion Web Client for more information.
DEV-5789	Views can now be controlled by a widget	It is now possible to select a view when setting up a widget. This view will then be used when showing data for the widget.
DEV-5703	Units in grid caption	In the Web Client main grid, units are now added to the captions.
DEV-5699	WebKit support for search items query	The WebKit functionality has been changed to apprehend a specified item query when the result is shown.
DEV-5625	Browser tab	The browser tab will now show more information about the Perfion Web Client page currently loaded.
DEV-5617	Report option in factbox	Redesigned report option in factbox so it is possible to generate report from factbox.
DEV-5611	Show family in main grids	The Show Family button will now be shown always in all main grids.
DEV-5610	Change to login dialog	The Perfion version information has been moved to the bottom of the login dialog.
DEV-5609	Design update for change user password	The change password modal has been updated according to the Perfion Web Client new design standard.
DEV-5581	Removed All Items from search categorizer	Removed the 'All Items' entry in categorizers running on a search base feature.
DEV-5575	Application server jobs	When application server jobs finish, they are moved to completed list without having to refresh.

Issue ID	Title	Description
DEV-5555	Design update for boolean controls	The boolean controls have been updated to meet the new design standard of the web client.
DEV-5538	Grid view mode	The grid view mode layout is now more slimmed down and leaner.
DEV-5447	Views controlled by search categorizer	Using a search in a categorizer will now carry over the view from the search to the main grid.
DEV-5446	Hard validation in Web Client	The Web Client now respects feature validation (hard) so it will block the user from saving invalid data.
DEV-5445	Deprecated: Running a report as CSV	When selecting parameters for building a report, the CSV format has been removed.
DEV-5390	Read Only feature	<p>A feature can now be set read only. Setting a feature read only means that:</p> <ul style="list-style-type: none"> • A user cannot edit its value in neither the grid nor the Item Editor. Editors will be greyed out and disabled. • A user cannot import data that directly sets any read only feature. • This also applies when running an import through the Application Server. <p>The restrictions apply even for Super Users and Administrators.</p>
DEV-5282	Updated no content image	The "No content image" has been changed to be the correct Perfion image.
DEV-5227	Administration for channels and sections	Added administration functionality for channels and sections.
DEV-5123	Header and work-mode bar	A new header and work-mode bar has been introduced. Work-mode expands on the edit/output modes that used to be part of the main grid toolbar.
DEV-5074	Improve language selection in item editor	In the item editor it is now possible to close a language column directly from the columns. The language selection has been moved to the toolbar and the menu is now more user friendly and consistent with the rest of the application.
DEV-5073	Item editor: filters moved to bottom	In the item editor the filters have been moved to the bottom to be consistent with the overall layout.
DEV-5038	Moved functionality to ... menu	Moved some toolbar functionality to a "... " menu to clean up the user interface and emphasize main workflows.
DEV-5012	Selectable overlays left to right	Content now flows left to right instead of top down.
DEV-4980	Dragging items between grids	It is now possible to drag items from one grid to another. This enabled the user to change category or catalog.

Issue ID	Title	Description
DEV-4979	Dragging items within a grid	It is now possible to drag items around to change parent and sorting within the main grid and the publish grid.
DEV-4666	Selecting data and views	It is now possible to change views before changing selected data.
DEV-4525	Webkit design	The Webkit design has been changed to match the new Perfion design line.
